

METHOD AND APPARATUS FOR A REMOTELY SWITCHABLE POWER SUPPLY

ABSTRACT OF THE DISCLOSURE

- 5 One or more controlled power outlets placed on a power supply housing having the desirable characteristic that the height of the housing allows it to be mounted in a standard network device rack occupying one rack unit. To accomplish this configuration, controller power outlets are distributed on one surface of the housing, and sockets for receiving a control signal are distributed on a different surface. In various embodiments, one or more power sockets may be provided, and one or more power sockets may be controlled by signals received on each control socket.
